

Webinar AL Amyloidosis

On **October 26, 2021** the first ever World Amyloidosis Day will be organized by Amyloidosis Alliance and patient organisations from 18 different countries, spanning 4 continents. The objective is to alert the world to the diagnostic delay that patients face. Faster diagnoses and better quality treatment can only be achieved by more widespread knowledge and awareness of the disease. So let's connect patients, doctors and caregivers and the amyloidosis community to the general public.

AL amyloidosis webinar, speakers and subjects:

Prof.dr. Monique Minnema, will talk about Daratumumab as therapeutic monoclonal antibody and the Andromeda study;

Barbara Mazzolini will be sharing her experience with Daratumumab as a patient;

Prof. Angela Dispenzieri gives an update about supportive care & symptom management;

Prof. Ashutosh Wechalekar informs us about new developments in drug development and new immunotherapies.

For whom: interesting for patients and their families, health professionals and authorities, scientists, pharmaceutical companies and everyone interested in Amyloidosis

When October 26, 2021 from 17.00-19.15 (Central European Time)

Join Register for this free ZOOM webinar via [this link](#)
